No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Part of a ternary complex that binds to the downstre control sequence (DCS) of the pre-mRNA. Mediates exon inclusic transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the farupstream element (FUSE). May activate gene expression (By similarity). Binds to the dendritic targeting element and may

                                                                                                                                                                                                                                                                                                   a role in mRNA trafficking.

-!- SUBUNIT: Part of a ternary complex containing FUBP2, and HNRPH1 (By similarity).

-!- SUBCELLULAR LOCATION: Nuclear. A small proportion is the cytoplasm of neuronal cell bodies and dendrites.

-!- SIMILARITY: Contains 4 KH domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rehbein M., Wege K., Buck F., Schweizer M., Richt "Molecular characterization of MARTA1, a protein dendritic targeting element of MAP2 mRNAs.";

Cell. Biol. 20:7463-7479(2000).

-i- FUNCTION: Binds to the dendritic targeting element and may play a role in mRNA trafficking (By similarity). Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. FUNCTION: Binds to a 54-nucleotide localization signal (the FUNCTION: Binds to a 54-nucleotide region of beta-actin mRI zipcode) found in the 3' untranslated region of beta-actin mRI and may play a role in its localization.

SUBCELLULAR LOCATION: Predominantly nuclear. Also detected in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \overline{\text{DEVELOPMENTAL}} STAGE: The highest expression is embryos, is reduced to 30% before hatching and thereafter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: Contains 4 KH domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MOUSE
                      -!- FUNCTION: Single-stranded nucleic acid binding preferentially to oligo dC (By similarity).
-!- SUBCELLULAR LOCATION: Nuclear (By similarity).
-!- TISSUB SPECIFICITY: Ubiquitous.
-!- SIMILARITY: Contains 3 KH domains.
                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa;
Mammalia; Eutheria;
